

Sub B1
A2

a second structure having a second depth disposed adjacent to said first structure and between said first and second rails, said second depth being lower than said first depth; and wherein said first structure extends over one-third of a length of the slider body from the leading edge of the slider body.

Sub B3
A3

11. (Amended) A head suspension assembly comprising:
a flexure; and
a slider coupled to said flexure, said slider including
a slider body;
first and second rails extending in a longitudinal direction along the slider body where [the] leading edges of said rails are spaced from a leading edge of the slider body;
a first structure having a first depth and extending from a leading edge of the body to the leading edges of the first and second rails and between the first and second rails;
a second structure having a second depth disposed adjacent to said first structure and between said first and second rails, said second depth being lower than said first depth; and
wherein said first structure extends over one-third of a length of the slider body from the leading edge of the slider body.

Sub B5
A4

21. (Amended) A disk drive comprising:
a recording medium adapted to be rotated at a given velocity;
a flexure;
a slider coupled to said flexure and adapted to fly above said recording medium when rotated, the slider including
